Title: Airblast Blast Rooms

Airblast blast rooms

Airblast blastrooms come in any required dimension. The rooms are modular built from steel panels. Easy access to the blastroom on one or both sides, is provided by sturdy folding doors suspension by special hinges with thrust bearings.

Blastroom equipment

Airblast designed high efficiency filters to clean the dusty air. To save energy this clean air can be returned into the blast room. An adjustable valve system guarantees an under pressure to prevent dust emission from the room.

Ensure efficient use of blasting media due to recycling.

An abrasive reclaim system transports the spent abrasive to a cleaning unit consisting of elevator assembly, airwash separator and silo. Optionally the unit can be extended with a rotary screen and magnetic separator to allow for simultaneous use of metallic and non-metallic abrasives.

Provide a safe environment for blasters to operate.

For protection the inside of the blast room and doors is lined with high wear resistant rubber.

Special protected lighting elements give very good visibility.

Allow high quality blasting in a controlled environment.

Airblast has completed many Blast room projects in the Europe, the Far East and the Middle East. Shipyards such as Gdansk and Keppel utilize Airblast Blast rooms.

We would be happy to design a tailor made blast room according to your individual requirements.

- Portable/Stationary Abrasive Blast Equipment - Nozzles - Nozzle Holders - Hoses - Couplings - Lighting
- Wetblast Equipment - High Pressure Waterjetting - Personal Protection - Blast Cabinets - Blastrooms
- Vacuum Blast/Recovery Equipment - Portable/Stationary Wheelblast Equipment - Dehumidifiers
- Pipe Cleaning/Coating - Air Treatment - Mobile Dust Collectors - Media - Paintspray Equipment
- Plural Component - Measuring Instruments
